Remote Connection to Mac Computers Via VNC

How to

Summary:

In order to connect to a Mac computer from another Mac on the network, you don't need to install any software; The protocol used to connect is VNC (Virtual Network Computing) that is already installed on the Mac, and only needed to be activated.

Resolution:

- 1. Go to the Finder
- 2. From the top menu select the Go menu and select "Connect to Server" (or cmd+K)
- 3. In the window that opens enter "vnc://" and then the client's IP number in this format:

vnc://132.x.x.x and click "Connect"

	Connect	to Server	
vnc://132.77.12	8.41		~
Favorite Servers:			
			_
+ - *~	?	Browse	Connect
N			

4. Enter your Mac's username and password and click "Connect" again (the Mac you are connecting to).

F	Screen S password	haring requires a user name and I to sign in to "132.77.118.43".
4	Connect:	 By Requesting Permission As Registered User
	User Name:	username
	Password:	•••••
		Remember password
		Cancel Sign In

5. You are now connected to your display.
